Professional Summary

AI/ML-focused B.Tech graduate with hands-on experience in deep learning and computer vision using Python, TensorFlow, and Keras. Skilled in image preprocessing, model optimization, and validation, with additional experience in backend development, REST APIs, and SQL. Seeking an entry-level AI/ML Engineer role.

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript, TypeScript

Generative AI: LLMs, RAG, Embeddings, Prompt Engineering, Tool Calling, LLM Evaluation, Guardrails

Machine Learning: Scikit-learn, XGBoost, Deep Learning, Computer Vision, NLP, Model Evaluation

Frameworks: FastAPI, LangGraph, TensorFlow, PyTorch

MLOps & DevOps: MLflow, Docker, Git, GitHub Actions, pytest

Databases: PostgreSQL, Pgvector, MySQL

Professional Experience

EWGCS Pvt. Ltd., Associate Consultant — Nov 2025 – Present

- Develop enterprise applications using Java, Groovy, SQL, REST APIs, Business Services, Service Scripts, Data Areas, Zones, and Inbound Web Services.
- Troubleshoot backend logic and SQL workflows supporting customer, billing, service agreement, case, and user-management processes in Oracle Cloud.
- Integrated Oracle HCM with OUCCS using REST APIs, Business Services, and SQL to automate enterprise user data operations.
- Investigate application logs and database outputs to resolve backend issues and perform Root Cause Analysis.
- Collaborate with development and business teams on code reviews, Agile development, CI/CD, and release activities.

Projects

Voice Lab – Real-Time Voice Assistant | *Python, Pipecat, FastAPI, WebSockets, Sarvam, Groq, OpenRouter, PostgreSQL*

- Built a browser-first voice assistant on Pipecat with a real-time STT → LLM → TTS pipeline over WebSockets, mixing Sarvam speech with Groq as the primary LLM and automatic OpenRouter failover.
- Added optional PostgreSQL-backed conversation persistence, replaying stored turns to resume sessions and extracting long-term memories that are appended to future system prompts.
- Designed a provider-agnostic architecture where vendor code lives in a single module, guarded by a fallback reply layer for empty LLM responses and validated with pytest.

Odyssey – Travel Journal | *React, TypeScript, Spring Boot, REST APIs, JWT, SQL, Postman, React Query*

- Developed a full-stack web application with a TypeScript React client, Spring Boot backend, REST API layer, JWT authentication, and SQL persistence.
- Tested and validated REST API endpoints using Postman, covering request parameters, response payloads, HTTP status codes, authentication, and database-backed workflows.
- Designed backend service boundaries for journal, user, location, and map workflows, emphasizing separation of concerns, and debugged API issues by tracing request and response behavior across backend workflows.

Vanguard – Vendor Risk Intelligence | *Python, FastAPI, SQLite*

- Building an evidence-led vendor disruption intelligence system that surfaces supply-chain risk signals with source citations and transparent risk scoring.
- Designing a human-in-the-loop triage workflow where analysts review and act on flagged risks, maintaining an auditable decision trail for procurement decisions.
- Implementing a FastAPI backend with SQLite persistence and a Python data pipeline to aggregate, score, and track vendor risk over time.

Education

Kakatiya Institute of Technology and Science, B.Tech in Information Technology — 2022 – 2026

CGPA: 8.89/10

Certifications

Claude Certified Developer – Foundations (Anthropic)

Full Stack Java Development

Data Structures and Algorithms
